

HDOC DAY-22

1. Problem Statement Write a menu-driven C program that accepts two positive integers, m and n , where $m \leq n$. Display an interactive menu and use a switch statement to perform:

1. Print multiplication tables of m and n side by side using multipliers from 1 to 10.
2. Display a multiplication grid containing products of integers from 1 to m and 1 to n .
3. For each integer from m to n , print that integer followed by its next 5 consecutive integers.
4. Exit the program.

Validate inputs to ensure $m > 0$, $n > 0$, and $m \leq n$. Display appropriate error messages for invalid choices and continue processing until the user chooses to exit.

2. Algorithms

Main Execution Flow

1. Read m and n .
2. Validate $m > 0$, $n > 0$, and $m \leq n$; re-prompt if invalid.
3. Display main menu inside a loop.

4. Read user selection and execute corresponding function using switch-case.
5. Loop until choice equals 4.

Operation Algorithms

- **print_tables_side_by_side(m, n):** Loop i from 1 to 10: print $m \times i = m \times i$ and $n \times i = n \times i$ side by side formatted in columns.
- **print_multiplication_grid(m, n):** Print column header line (1 to n). Outer loop row from 1 to m , inner loop col from 1 to n : compute and print $row * col$ aligned in grid form.
- **print_consecutive_integers(m, n):** Loop i from m to n . Print i : followed by inner loop j from 1 to 5 printing $i + j$.
